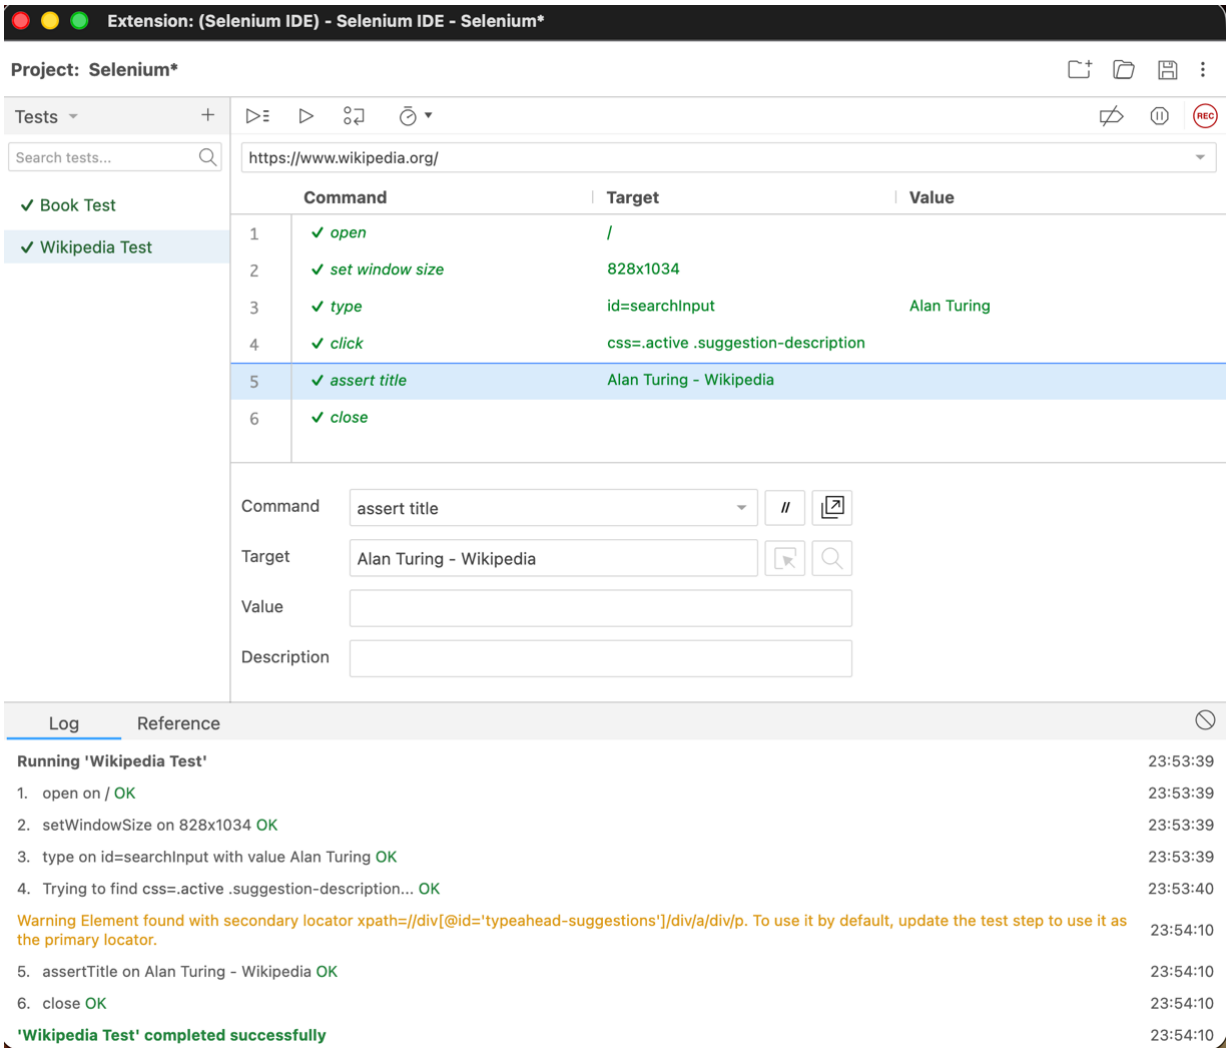
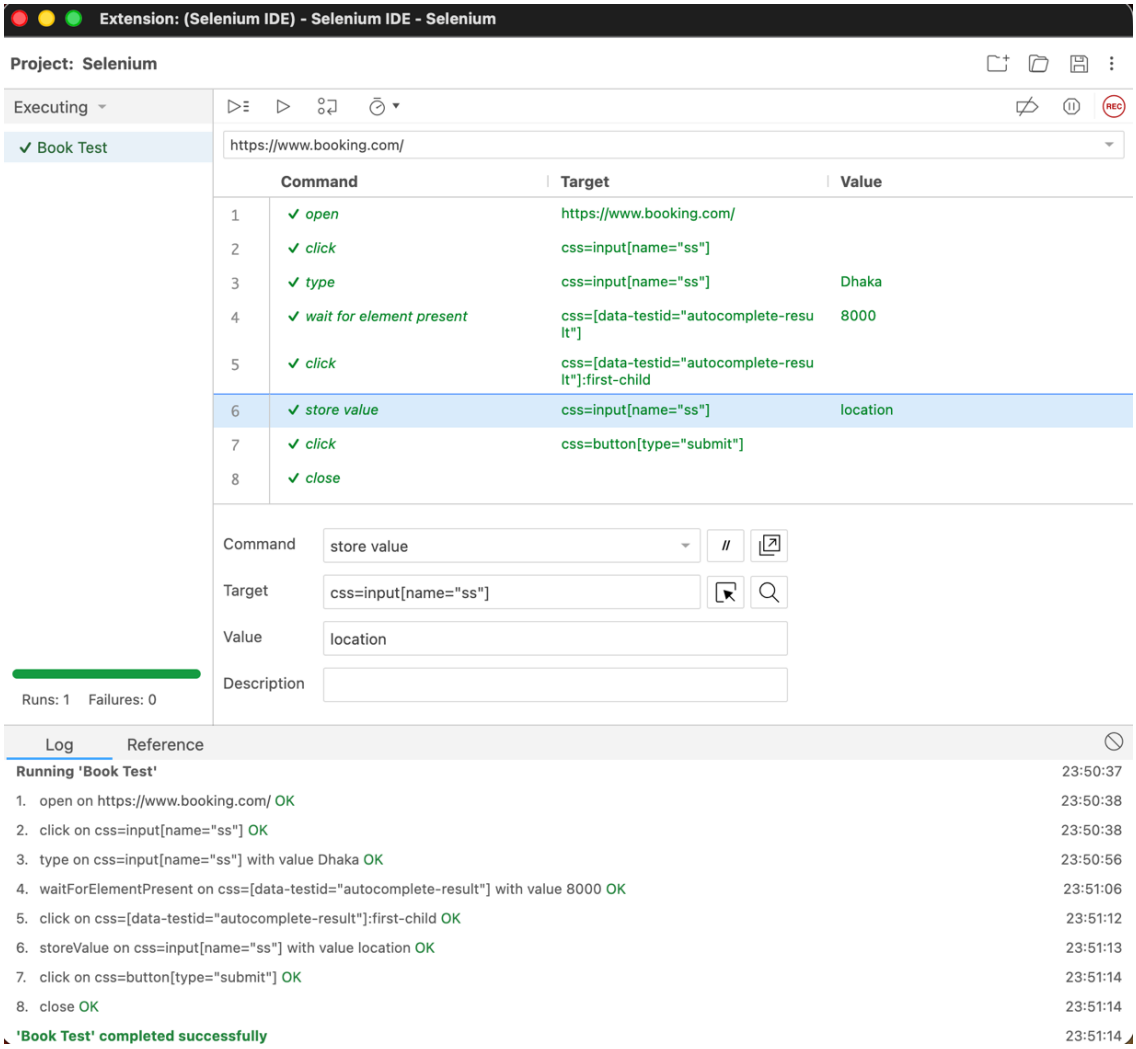
Task 1: Wikipedia search & navigation

Site: Wikipedia
Goal: Search for *Alan Turing* and verify you reached the article.
What to do (brief): open homepage → type `Alan Turing` → submit/search → wait for article heading (`#firstHeading`) → assert heading or title contains "Alan Turing".
Key checks: `waitForElementPresent #firstHeading`, `assertText #firstHeading Alan Turing` (or `assertTitle`).



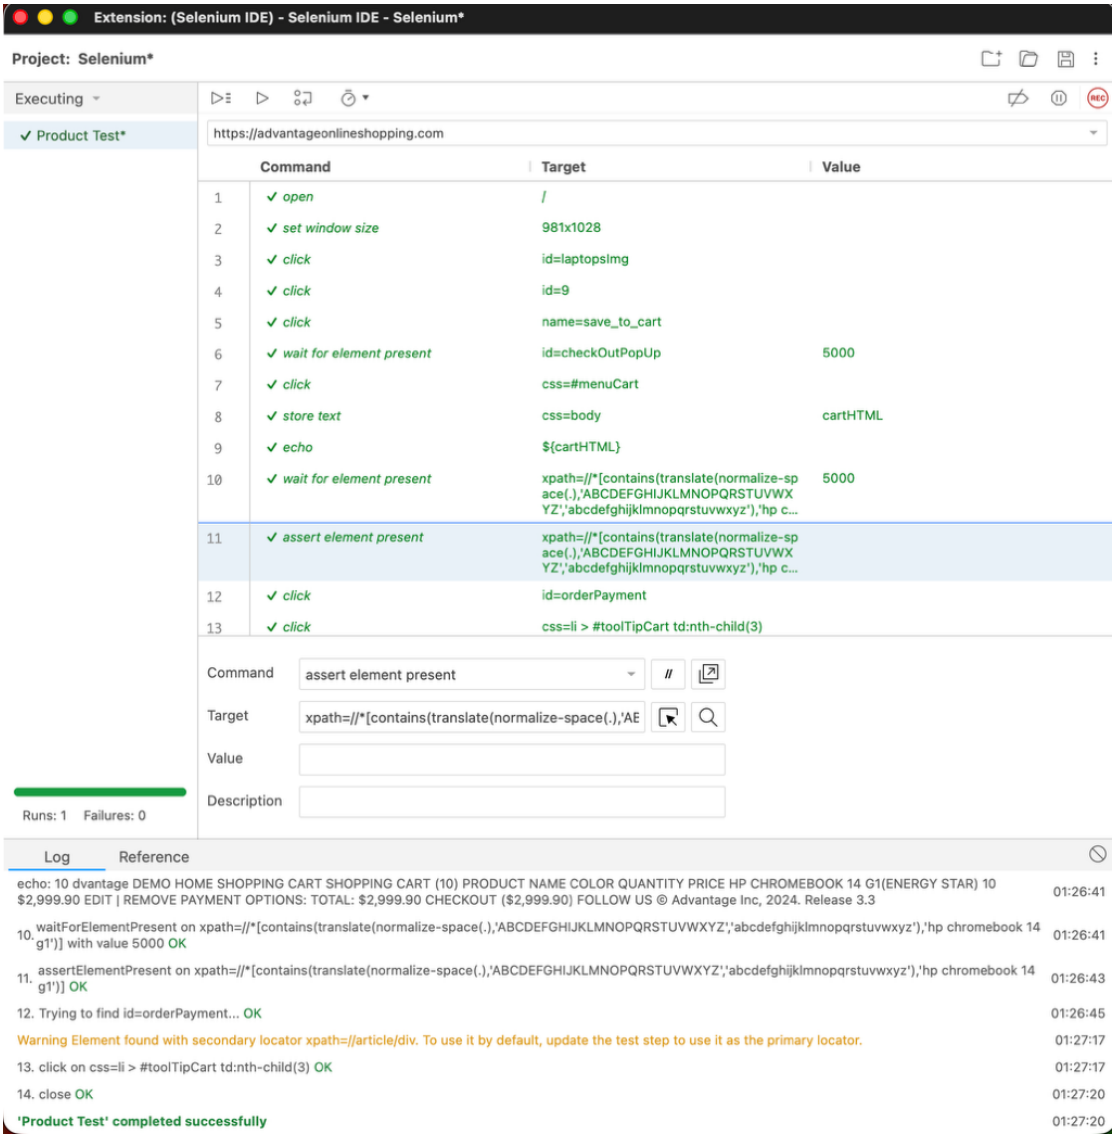
Task 2: Dynamic dropdown selection (Booking.com)

Site: Booking.com
Goal: Type a city (Dhaka), select suggestion from AJAX dropdown, verify input was populated before search.
What to do (brief): click search input → type `Dhaka` → `waitForElementPresent` for suggestion container → click first suggestion → **verify** the input contains "Dhaka" (use stored value or contains-check) → then click Search.
Gotcha: use stable locators (e.g., `input[name="ss"]` and `data-testid`/`contains()` XPath) and avoid ephemeral IDs.



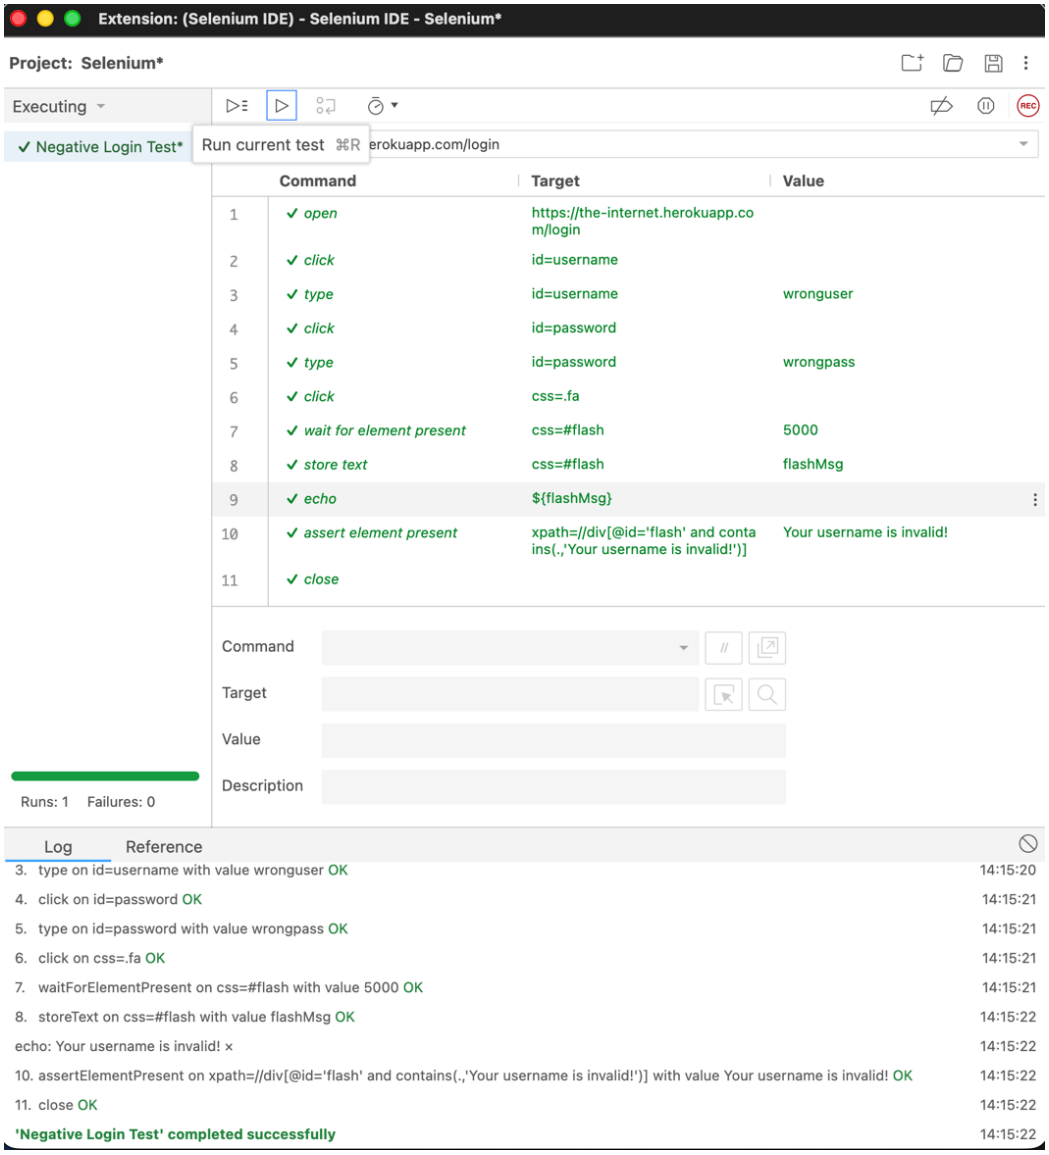
Task 3: Product search & add-to-cart (Advantage demo)

Site: Advantage Online Shopping
Goal: Open category, open a product (HP Chromebook 14 G1), add to cart, verify the cart updated.
What to do (brief): open laptops → wait for product tile → click product → wait for AddToCart button → click Add to Cart → open cart or read cart tooltip → assert product name or cart count updated.
Verification options: `assertTextPresent "HP Chromebook 14 G1"` or `storeText` cart area → assert contains product name.



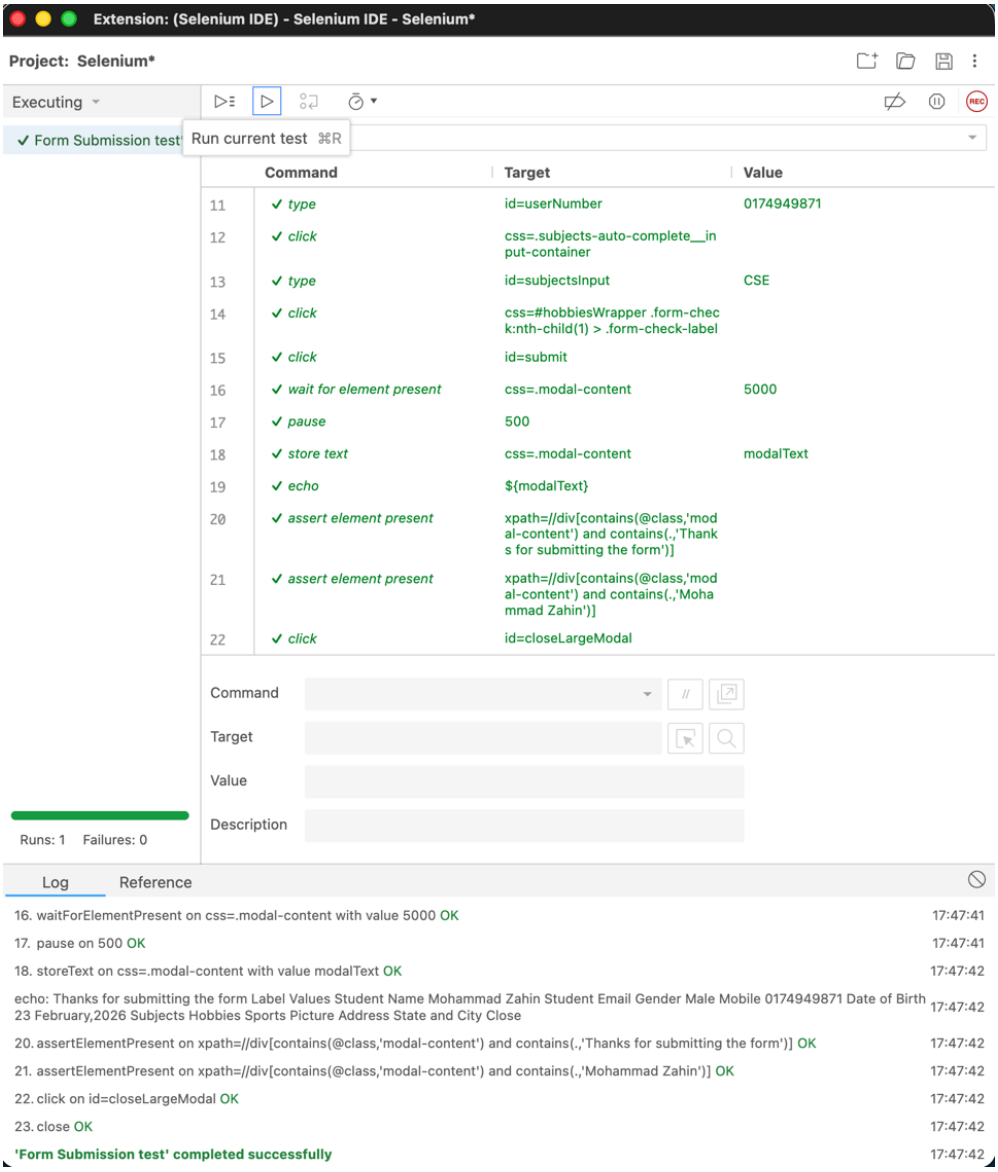
Task 4: Negative login test (Herokuapp)

Site: The Internet (Herokuapp)
Goal: Submit invalid credentials and confirm the shown error message.
What to do (brief): open `/login` → enter `wronguser` / `wrongpass` → click Login → `waitForElementPresent #flash` → assert the flash text contains “Your username is invalid!”.
Tip: grab `storeText css=#flash` then `assert` or use an XPath `contains()` to ignore extra symbols (×).



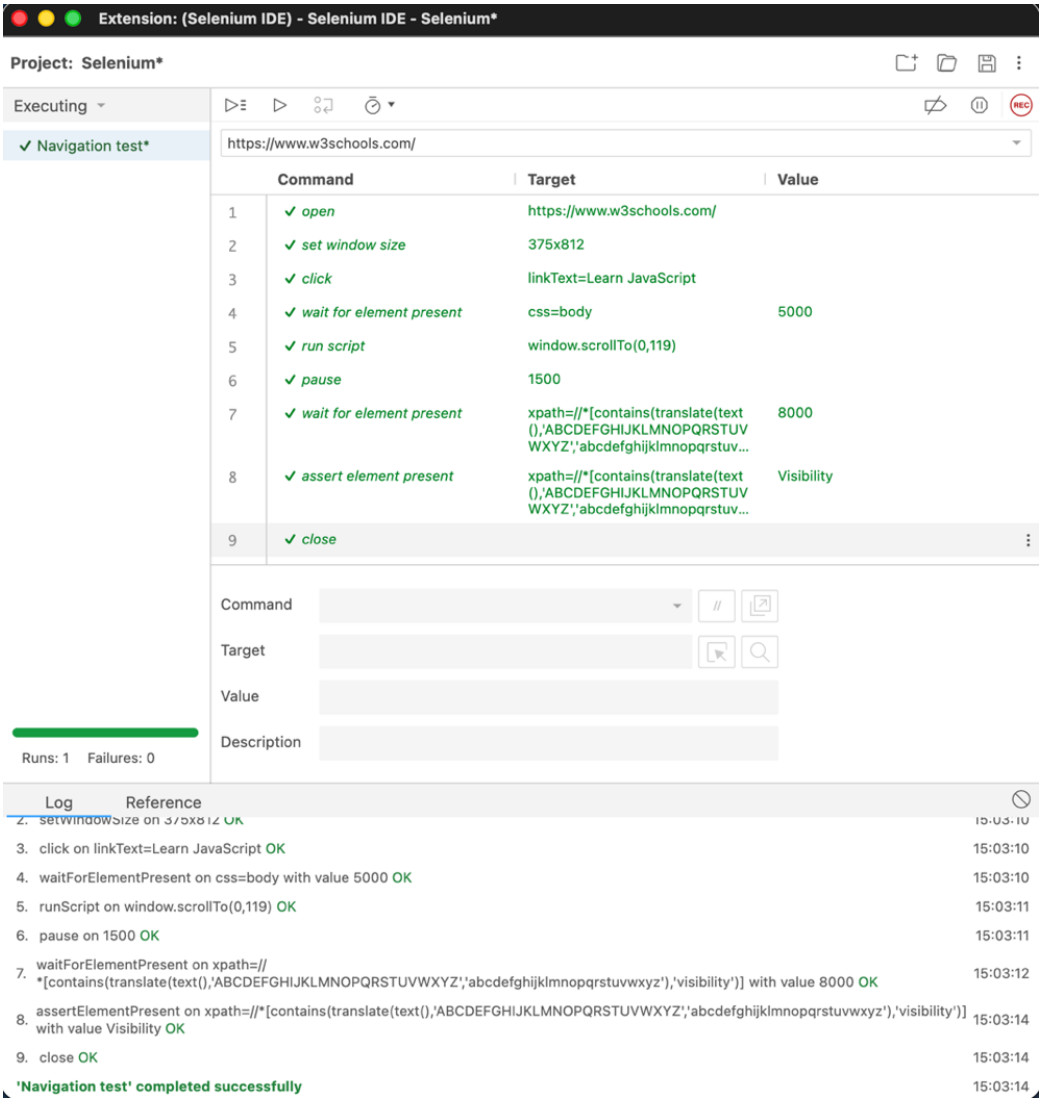
Task 5: Contact form submission (DemoQA)

Site: Demo QA
Goal: Fill required fields, submit, assert the confirmation modal appears and contains submitted values.
What to do (brief): open form → fill First/Last name, Email, Gender, Mobile (optionally DOB, Subjects, Hobbies) → click Submit → `waitForElementPresent .modal-content` → capture modal text → assert modal contains "Thanks for submitting the form" and the student name.
CSP note: DemoQA can block scripted `type` — use `click` + `sendKeys` in Selenium IDE or use WebDriver `send_keys`.



Task 6: Responsive menu navigation (W3Schools)

Site: W3Schools
Goal: Switch to mobile viewport, open responsive menu, navigate to Learn JavaScript, scroll to the "visibility" examples and assert presence.
What to do (brief): set small window size → open menu → click Learn JavaScript → wait for page → scroll → `waitForElementPresent` using a case-insensitive XPath for "visibility" → `assertText` or `assertElementPresent`.
Tip: use `translate()` in XPath to make the match case-insensitive.



Task 7: File upload automation (Herokuapp upload)

Site: the-internet.herokuapp.com (same site as Task 4)
Goal: Upload a local file, press Upload, and assert "File Uploaded!" appears.
What to do (brief): open `/upload` → set the file input (IDE `type` or `chooseFile` or WebDriver `send_keys` with absolute path) → click Upload → `waitForElementPresent css=h3` → `assertText css=h3 File Uploaded!`.
Important: Selenium IDE file upload works only in Chrome IDE (or use WebDriver). For manual practice, click the file input and choose the file yourself, then click Upload and assert.

Extension: (Selenium IDE) - Selenium IDE - Selenium*

Project: Selenium*

Executing

✕ Automation Test*

https://the-internet.herokuapp.com/upload

	Command	Target	Value
1	✓ *open*	https://the-internet.herokuapp.com/upload	
2	✓ *set window size*	1280x800	
3	✓ *click*	id=file-upload	
4	✓ *pause*	5000	
5	✓ *wait for element present*	css=h3	5000
6	✕ ***type***	**id=file-upload**	**/Users/md.abrarhossainzahin/Desktop/Zahin.txt**
7	*type*	id=file-upload	C:\fakepath\Zahin.txt
8	*click*	id=file-submit	
9	*assert text*	xpath=//h3	File Uploaded!
10	*close*		

Command: type

Target: id=file-upload

Value: /Users/md.abrarhossainzahin/Desktop/Zahin.txt

Description:

Runs: 1 Failures: 1

Log | Reference

'Automation Test' ended with 1 error(s)	22:00:56
Running 'Automation Test'	22:01:11
1. open on https://the-internet.herokuapp.com/upload OK	22:01:12
2. setWindowSize on 1280x800 OK	22:01:12
3. click on id=file-upload OK	22:01:12
4. pause on 5000 OK	22:01:12
5. waitForElementPresent on css=h3 with value 5000 OK	22:01:17
6. type on id=file-upload with value /Users/md.abrarhossainzahin/Desktop/Zahin.txt Failed: File uploading is only supported in Chrome at this time	22:01:17
